The complete list of Patient Education Resource Pages is available to view at <http://cancer.ucsf.edu/support/crc/patient-education-resources>

Overview

Cancer of the esophagus is divided into two major types: squamous cell carcinoma and adenocarcinoma, depending on the type of cells that are malignant. Squamous cell carcinomas arise in cells that line the upper two-thirds of the esophagus. Adenocarcinomas usually develop in the glandular tissue in the lower part of the esophagus. The treatment of these types may be similar but depends upon the details of each individual case. Website:
