## Overview

About 50,000 people in the United States are diagnosed with kidney cancer every year. The kidneys are a pair of kidney bean-shaped organs, located above the waist on either side of the spine, that filter and clean blood and produce urine. The most common adult kidney cancer is renal cell carcinoma, which forms in the lining of small tubes in the kidney. Children usually develop a different form of kidney cancer called Wilms' tumor. ## UCSF Resources

### UCSF Genitourinary Medical Oncology Clinic

Home to some of the country's leading specialists in cancers of the genital and urinary systems. We provide the full spectrum of care, including screening exams, transrectal ultrasound and biopsy, diagnostic imaging, second opinions and treatments ranging from surgery to radiation therapy. The clinic also offers education and support groups. In addition, patients may have access to the latest experimental therapies by participating in clinical trials.
